

World of Wonder in Science

seminar series featuring

Rain Bosworth, Ph.D.

Dr. Rain Bosworth is an Associate Research Scientist in the Department of Psychology at the University of California, San Diego. She teaches undergraduate courses in developmental psychology, psycholinguistics, and biological psychology. Dr. Bosworth has been highly successful in obtaining research grant funding, with uninterrupted grant funding since 2001. She is currently lead PI on two research grants from NSF and NIH studying visual perception in Deaf and hearing infants, children, and adults. She considers herself a developmental vision scientist, dedicated to studying how early sensory experiences shape visual abilities later in life. She has addressed this theme in children with congenital eye disorders and in healthy, premature infants. She is currently working on a project addressing whether television exposure impacts young infants' visual perception abilities. Dr. Bosworth will present her experiences as a deaf scientist, the challenges she faced, and how her research interests evolved over time.
